MARKET WATCH · OCTOBER 21, 2026

# Stocks and IPOs for a 5-hour window

Only listed U.S. stocks can be traded inside a single five-hour session. Upcoming IPOs and Jio's listing on Oct 28 fall outside this window. No one can reliably predict which stock moves most in five hours, so the split below is an illustrative risk framework, not a forecast.

## Illustrative allocation by risk tier

**Low: SPAC units (40%)**
Blank-check shells priced near $10.00 with a deal not yet announced. Price moves are usually small, but upside is limited too.

**Medium: larger biotech IPOs (45%)**
CTY, IAM and TRXB have bigger offerings and more trading history, but drug-trial news can move them sharply.

**High: small caps (15%)**
RTSN and AMRO are small, low-priced and thinly traded. Spreads are wide and a single order can move the price.

## Tradable today (listed)

| TICKER | TIER | PRICE RANGE | SPLIT |
|---|---|---|---|
| **CTY** | Medium | $17–$19 | ~15% |
| **IAM** | Medium | $15–$17 | ~15% |
| **TRXB** | Medium | $14–$16 | ~15% |
| **RTSN** | High | $11–$13 | ~8% |
| **AMRO** | High | $4.25 | ~7% |
| **SPAC units** | Low | ~$10.00 | 40% |

Recent listings: CTY and IAM listed Oct 15–16. The SPAC group is split evenly across PAXGU, AFNXU, FLSC, HRIAU, SCQCU and TCXB.

## Not tradable in this window

| NAME | TICKER | DATE | RANGE |
|---|---|---|---|
| Jio Platforms (IN) | **Jio** | Lists Oct 28 | ₹1,065–₹1,119 |
| Bitari | **BIAI** | Oct 19 (pricing) | $7.00 |
| Web3Labs Global | **MDAT** | Oct 19 (pricing) | $4–$5 |
| Primagrove | **YNTE** | Oct 26 (pricing) | $4–$6 |
| BW Industrial | **BWGC** | Oct 26 (pricing) | $6–$7 |

These have no trading history yet. Exchange listings for the four U.S. names are unconfirmed.

### Before any five-hour trade

Use limit orders, since thin listings can gap through market orders. Decide the maximum loss you accept before you enter. Cap any single name at the share shown above. Newly listed stocks often have lockups and volatile first weeks, so check each issuer's filings.

Sources: third-party IPO calendars and Groww's Jio Platforms summary, as of October 19–21, 2026. Percentages are an illustrative framework, not a prediction or a recommendation. Day trading carries a high risk of loss. Consult a licensed financial advisor before investing.

TRADING DESK · WED, OCT 21, 2026

# The 5-hour window

6 tradable groups · 5 not yet trading · **Illustrative, not a forecast**

## ALLOCATION BY RISK

| | |
|---|---|
| Low · SPAC units | 40% |
| Medium · biotech IPOs | 45% |
| High · small caps | 15% |

Weighting leans toward names with more trading history and away from thin, low-priced listings.

## TRADABLE TODAY

October 21, 2026

# High-yield plan for a 5-hour trade

No one can predict a 5-hour return. A high-yield mix puts more money in stocks that move a lot, so you can gain more and lose more.

## 1. Pick how much risk you want

**Steady**
Smaller swings
70% low
25% medium
5% high

**Balanced**
Middle ground
40% low
45% medium
15% high

**High yield**
Biggest swings
20% low
50% medium
30% high

## 2. The high-yield split

| Stock | Risk | Share |
|---|---|---|
| **CTY** City Therapeutics | Medium | **17%** |
| **IAM** Iambic Therapeutics | Medium | **17%** |
| **TRXB** TRex Bio | Medium | **16%** |
| **RTSN** Retension Pharma | High | **15%** |
| **AMRO** Amaero | High | **15%** |
| **SPACs** 6 units, split evenly | Low | **20%** |
| **Total** | | **100%** |

## 3. What $1,000 could become

These are what-ifs, not predictions. The high-yield mix makes both ends of this range more likely.

| Down 10% | Down 5% | Flat | Up 5% | Up 10% |
|---|---|---|---|---|
| $900 | $950 | $1,000 | $1,050 | $1,100 |

## 4. Three rules

**Only use money you can lose.**
**Set your stop before you buy,** for example sell if you are down 5%.
**Use limit orders,** because new stocks can jump past your price.

---

Prices are IPO ranges from third-party IPO calendars, Oct 19–21, 2026, not live quotes. Percentages are an illustrative framework, not a prediction or a recommendation. Day trading carries a high risk of loss. Talk to a licensed financial advisor before investing.

# Quiz: Stocks, IPOs and the 5-Hour Window

**Name** _____ **Date** _____ **Score** _____ **/ 10**

**Directions.** Questions 1–7: fill in the circle next to the best answer. Questions 8–10: write your answer on the lines.

## Part A · Multiple choice

**1. What is an IPO?**

- ◯ A. A company's first sale of shares to the public
- ◯ B. A government bond
- ◯ C. A type of savings account
- ◯ D. A stock split

**2. Which of these can be traded within a single 5-hour session today?**

- ◯ A. Jio Platforms
- ◯ B. Bitari (BIAI)
- ◯ C. City Therapeutics (CTY)
- ◯ D. Primagrove (YNTE)

**3. Why are SPAC units placed in the low-risk tier?**

- ◯ A. They are insured by the government
- ◯ B. They usually trade near $10 and move little before a deal is announced
- ◯ C. They always pay dividends
- ◯ D. They cannot lose value

**4. In the High-yield mix, what share of the budget goes to high-risk stocks?**

- ◯ A. 5%
- ◯ B. 15%
- ◯ C. 30%
- ◯ D. 50%

**5. Why use a limit order on a newly listed stock?**

- ◯ A. It guarantees a profit
- ◯ B. It keeps you from buying or selling past a price you set
- ◯ C. It removes all trading fees
- ◯ D. It makes the trade happen faster

**6. If $1,000 drops 5%, what is it worth?**

- ◯ A. $950
- ◯ B. $995
- ◯ C. $900
- ◯ D. $1,050

**7. What does setting a stop before you buy help you do?**

- ◯ A. Limit how much you can lose
- ◯ B. Guarantee a gain
- ◯ C. Buy more shares automatically
- ◯ D. Skip the trading fee

## Part B · Short answer

**8. In your own words, explain why no one can reliably predict a 5-hour return.**

**9. Jio Platforms' price band is ₹1,065–₹1,119 and one lot is 12 shares. What does one lot cost at the top of the band? Show your work.**

**Answer: ₹** _____

**10. Name one risk of trading a small, thinly traded stock such as AMRO.**

## Answer key

| # | Answer |
|---|---|
| 1 | A. A company's first sale of shares to the public |
| 2 | C. City Therapeutics (CTY) |
| 3 | B. They usually trade near $10 and move little before a deal is announced |
| 4 | C. 30% |
| 5 | B. It keeps you from buying or selling past a price you set |
| 6 | A. $950 |
| 7 | A. Limit how much you can lose |
| 8 | Sample: short-term prices react to news, orders and emotion that can't be known ahead of time. |
| 9 | 12 × ₹1,119 = ₹13,428 |

SPACE EXPLORATION TECHNOLOGIES · NASDAQ: SPCX · PUBLIC SINCE JUNE 12, 2026

# What will SpaceX stock be worth a year from today?

Today is Wednesday, October 21, 2026. One year from today is Thursday, October 21, 2027.

PRICE TODAY

**$161.99**

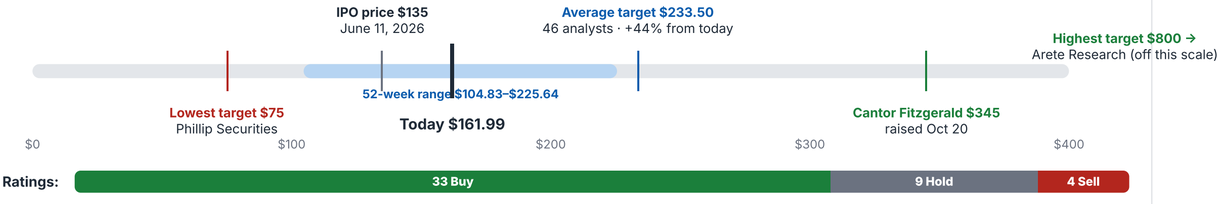

▲ +$14.20 (+9.61%) today

Yahoo Finance, as of 11:06 AM ET · market cap about $2.1 trillion

**The honest answer first:** no one can predict a stock price a year out with accuracy, and anyone who claims to is guessing. SpaceX has been public for four months and has already traded between **$104.83** and **$225.64**. What this page can do is show every published professional forecast, what each one would mean for your money, and the dated events most likely to move the stock before October 2027.

## Where 46 Wall Street analysts put the stock in 12 months

Price targets as of October 21, 2026 · MarketBeat

**Ratings:** 33 Buy · 9 Hold · 4 Sell

Consensus "Moderate Buy." Raised today: Wells Fargo $274, Needham $250, TD Cowen $224, Susquehanna $176.

## What each forecast means for $1,000 invested today

LOWEST PUBLISHED TARGET

**$75**

Phillip Securities · Strong Sell

**$1,000 → $463**

−54% · company worth about $1.0 trillion

Near independent fair-value estimates: Morningstar put the company at $780 billion and Damodaran at about $1.3 trillion.

IF NOTHING CHANGES

**$162**

Today's price

**$1,000 → $1,000**

0% · about $2.1 trillion

Already 20% above the $135 IPO price. The stock has swung 115% between its low and high in four months.

AVERAGE OF 46 ANALYSTS

**$233.50**

Consensus 12-month target

**$1,000 → $1,441**

+44% · about $3.1 trillion

Assumes AI compute and Starlink keep growing near the pace of the latest quarter and the market keeps paying a premium for it.

HIGHEST PUBLISHED TARGET

**$800**

Arete Research

**$1,000 → $4,939**

+394% · about $10.6 trillion

Would make SpaceX far larger than any company today. One firm's view, and an outlier even among bulls.

Dollar figures use today's price of $161.99 and about 13.2 billion shares outstanding (market cap divided by price). Analyst targets are opinions and are frequently wrong.

## What the business just reported (Q3 2026, Oct 20)

REVENUE
**$14.57B**
+161% vs. a year ago

NET INCOME
**$4.4B**
EPS $0.35 vs. $0.10 expected

AI COMPUTE ("SUPER INTELLIGENCE")
**$7.56B**
largest segment

STARLINK ("CONNECTIVITY")
**$5.25B**
+69% vs. a year ago

Capital spending was about $19.6 billion in the quarter, $16.4 billion of it on AI infrastructure. Full-year 2025 revenue was $18.7 billion with a $4.94 billion loss, so the swing to profit is recent.

## Why the range is so wide

- **Thin float.** Only about 5% of shares trade publicly, so modest buying or selling moves the price a lot.
- **Lock-ups end inside this window.** Early investors can start selling in December; Musk and insiders in June 2027.
- **Rich valuation.** The IPO priced at roughly 67 times trailing sales. Bears see $75; bulls see $800.
- **Contract risk.** Major compute contracts (Anthropic, Google) can be cancelled on 90 days' notice.
- **Control.** Musk holds roughly 82–85% of voting power with about 42% of the shares.

## The next 12 months: dated events that will move the stock

EARLY DEC 2026
**180-day lock-up ends**
Pre-IPO investors may sell; staggered early releases are already allowed after strong quarters.

JAN · APR · JUL · OCT 2027
**Quarterly earnings**
Four more reports. Growth pace and profit are what the $233 average assumes.

ANY TIME
**Nasdaq-100 decision**
Fast-track inclusion would force index funds to buy; critics warn it adds volatility.

MID-JUNE 2027
**366-day insider lock-up ends**
Musk and insiders become free to sell. Usually the biggest supply event for a new stock.

NOT YET ELIGIBLE
**S&P 500**
Needs profits over the last four quarters combined. The Q1 2026 loss keeps it out for now.

## Tomorrow morning, Thursday Oct 22, 9–10 AM ET: what 90 days of opens say

Overnight gap = 9:30 AM open vs. prior 4 PM close · Yahoo Finance history, Jun 12–Oct 20

**9:00–9:30** is pre-market: thin trading, wide spreads, prices can jump on little volume.

**9:30** is the regular open. The first half hour is usually the most volatile stretch of the day.

The open is anchored to **today's 4 PM close**, which is not known yet. The dollar bands use $162, the late-morning price. Re-anchor them to tonight's close.

**98% of days** — within ±5% · $153.90 – $170.10

**92% of days** — within ±3% · $157.14 – $166.86

**80% of days** — within ±2% · $158.76 – $165.24

**Typical day** — about ±1% · $160 –

**Median overnight gap:** 1.1%

**Largest gap so far:** +10.3% (Jun 15, IPO week)

**Direction:** opened lower on 49 of 89 days

**Typical full-day swing:** 5.3% high to low

**Today is an earnings-reaction day (+9.6%). Follow-through days gap more than average, so lean toward the wider bands.**

BOTTOM LINE

If you want one number, the closest thing to a market consensus is **$233.50**, about 44% above today. But the same 46 professionals span **$75 to $800**, and the stock moved 115% between its low and high in four months. A year from now, anything from well below the IPO price to roughly double today's price would surprise no one who follows it. Only invest money you can afford to lose, and talk to a licensed financial advisor before deciding.

Sources: price from Yahoo Finance (Oct 21, 2026, 11:06 AM ET); analyst targets, ratings and Q3 2026 results from MarketBeat (Oct 21, 2026); IPO terms, lock-ups, 2025 financials, float, valuation estimates and risk factors from the Wikipedia article on SpaceX's IPO and its cited reporting. Lock-up dates are approximate, counted from the June 11–12, 2026 pricing and first trade. This is general information, not investment advice or a prediction.

| **Main risk** | Debt and spending tied to one customer: OpenAI, which expects to burn $650B+ through 2030. Credit markets price a 2.8%-a-year default risk | AI spending without payoff; ad market slowdown; a bad quarter can drop it 10–20% overnight | 5% float, extreme valuation, Musk controls 82–85% of votes, contracts cancellable on 90 days' notice | Market-wide downturn. 40% of the fund is technology, so a tech sell-off hits it |
| **Why the gap to target is so large** | The stock fell 55% faster than analysts cut targets. A 92% gap usually signals stale targets, not a likely 92% gain | Targets rose with the stock; the gap is modest and typical | Opinions range from $75 to $800, so the average hides a fight | Not applicable |

## Ranked by evidence and risk, at each horizon

### 6 MONTHS · TO APRIL 2027

Too short to call "long term." Over any 6-month stretch the S&P 500 itself has fallen about 1 time in 3 historically, and single stocks far more often.

1. **VOO.** The only one of the four where a single company's bad news can't sink you.
2. **META.** Strongest fundamentals, but tonight's earnings decide the next six months. Buying before a report is a coin flip.
3. **ORCL.** Cheapest on earnings and near its low, but the pipeline delay and OpenAI worries can keep it down for months.
4. **SPCX.** The December lock-up release lands inside this window and adds selling pressure.

### 12 MONTHS · TO OCTOBER 2027

Historically the S&P 500 has finished higher in about 3 of every 4 twelve-month periods. Analyst targets are built for this horizon and still miss often.

1. **VOO.** Owns Meta and Oracle anyway, at 0.03% a year, with no single point of failure.
2. **META.** 50 of 58 analysts say buy, none say sell, 27× earnings for a company still growing. Best single-stock evidence here.
3. **ORCL.** Highest upside if the OpenAI build-out goes to plan, and the biggest hole if it doesn't.
4. **SPCX.** The insider lock-up ends in June 2027. Outcomes from $75 to $800 are on the table.

### 2 YEARS · TO OCTOBER 2028

Long enough for business results to matter more than mood. The S&P 500 has been higher after about 4 of every 5 two-year periods.

1. **VOO.** Over two years, most professional stock-pickers fail to beat it. That is the strongest single fact on this page.
2. **META.** Profitable, diversified across apps and ads, and its AI spending either pays off or gets cut; either way it survives.
3. **ORCL.** The OpenAI contract will have started by then. It is the clearest turnaround bet of the four, with real debt risk.
4. **SPCX.** Highest ceiling and lowest floor. Treat any money here as money you can lose.

## What would have to happen for each one to be the winner

**ORACLE WINS IF...**

OpenAI keeps paying, the New Mexico data center gets its gas pipeline, and AI cloud revenue ramps as promised in 2027. A beaten-down stock at 20× earnings can rebound hard, which is why analysts still average $250.

**META WINS IF...**

Tonight's report shows ad revenue still growing and AI spending under control. It is the steadiest earner of the three companies, so its "win" is likely to be a quieter 10–25% a year rather than a double.

**SPACEX WINS IF...**

AI-compute and Starlink growth hold near the latest quarter's pace, insiders don't dump shares after the lock-ups, and the market keeps paying a premium that assumes years of perfection.

**VOO WINS IF...**

Any of the three stumbles, which over two years is more likely than not for at least one of them. VOO rarely finishes first in any year and almost never finishes last. That is the point of it.

**BOTTOM LINE**

For a 1-to-2-year hold, the evidence favors **VOO** as the core position: it already contains Meta and Oracle, costs almost nothing, and does not depend on one company's story. Among the single stocks, **Meta** has the best balance of profits, price and analyst agreement; **Oracle** is the higher-risk rebound bet; **SpaceX** is a speculation, not an investment, at this stage. Six months is too short for any of them to be called long-term. A common way to hold all four views is a VOO core with a small, capped slice in whichever stock you believe in.

Prices from Yahoo Finance quote pages, Oct 21, 2026 (ORCL 11:27 AM ET, META 9:57 AM ET, SPCX 11:06 AM ET, VOO 10:59 AM ET). Analyst targets and ratings from MarketBeat, Oct 21, 2026. Oracle background from Yahoo Finance and Benzinga reporting; SpaceX background from the Wikipedia article on its IPO. Historical odds for the S&P 500 are approximate, based on rolling periods since 1950. U.S.-LISTED STOCKS AND FUNDS · WEDNESDAY, OCTOBER 21, 2026

# The highest dividend yields on the U.S. market, and which ones you can count on

Yield is the annual dividend divided by the share price. That is why the very highest yields are usually a warning: the price has crashed, the payout is about to be cut, or the "dividend" is really your own money coming back. Below are the top yields in two groups: the raw leaders, and the highest yields with decades of uninterrupted payments.

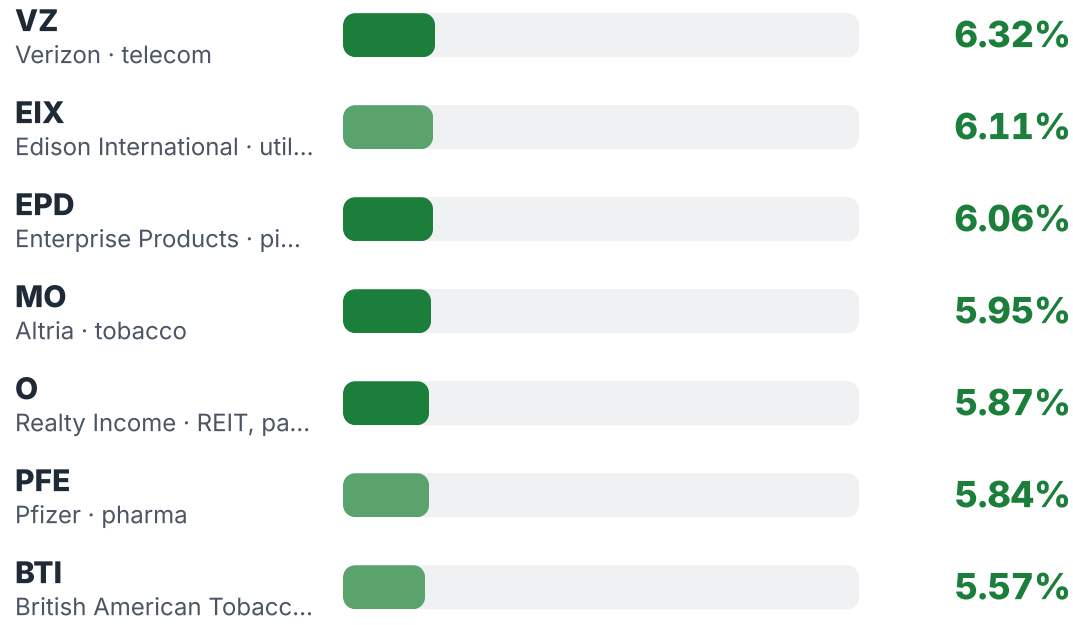

## Highest raw yields: 13% to 35%

Mortgage REITs, a royalty trust and option-income funds. Every one has cut its payout or lost more in price than it paid out.

## Highest yields with long payment records: 5.5% to 6.3%

Large companies that have paid, and mostly raised, their dividend for decades. Lower yield, far higher odds you receive it.

Bars are on the same scale as the left panel, so the gap is visible: the "safe" group pays about one-fifth of the raw leaders' yield.

| TICKER | YIELD | PRICE | WHAT THE DIVIDEND COMES FROM | RECORD | WHY THE YIELD IS WHERE IT IS |
|---|---|---|---|---|---|
| **MSTY** | **34.7%** | $15.13 | Selling call options on one stock (MicroStrategy); much of each payout is your own capital returned | Launched 2024 | Share price fell from a 52-week high of $82.10 to about $15. The yield is high because the price collapsed. |
| **MST** | **28.3%** | — | Leveraged single-stock option income fund | Just cut its monthly payout from $0.09 to $0.0763 | Same structure as MSTY with leverage added. |
| **CRT** | **24.5%** | — | Oil and gas royalties, paid out monthly as received | Payout swings with energy prices: last month $0.06, this month $0.2779 | A trust that depletes over time. The "yield" is this month's check annualized; next month's can be a quarter of it. |
| **ORC** | **24.1%** | $4.79 | Spread between borrowed short-term money and mortgage bonds | Has cut its dividend repeatedly | Down 43% from its 52-week high and falling 3.7% today. Price at its 52-week low. |
| **ARR** | **22.7%** | about $12.70 | Same mortgage-spread model | History of cuts | Price has dropped roughly a quarter since August, pushing the yield up. |
| **AGNC** | **16.6%** | $8.61 | Same model; the largest mortgage REIT | Cut in past rate cycles | Trading within 2% of its 52-week low of $8.41. |
| **NLY** | **13.1%** | $22.81 | Same model | Cut in 2019 and 2020 | The steadiest of the mortgage REITs, still rate-sensitive. |
| **VZ** | **6.32%** | $44.79 | Wireless and broadband profits · 11.7× earnings | About 19 straight annual raises | Slow growth and heavy debt keep the price low, which keeps the yield high. |
| **EIX** | **6.11%** | $56.75 | Regulated electric utility · 5.9× earnings | Long record; wildfire liabilities are the open risk | Price is down about 30% from its high on California wildfire exposure. |
| **EPD** | **6.06%** | $36.84 | Pipeline fees · payout covered 1.9× by cash flow | More than 25 straight annual raises | Partnership: sends a K-1 tax form, which some investors avoid. |
| **MO** | **5.95%** | $74.64 | Cigarette pricing power · pays out about 80–89% of earnings | More than 50 straight years of raises | Market discounts it for shrinking volumes; the payout has survived decades of that. |
| **O** | **5.87%** | $55.51 | Rent from 15,000+ properties · about 73% of cash flow paid out, monthly | More than 30 straight years of raises | Price 18% below its high as rates stayed higher; the payout kept rising. |
| **PFE** | **5.84%** | $30.11 | Drug sales · earnings depressed, so the payout ratio looks high | Pays steadily; cut once, in 2009 | Patent expirations through 2028 are the risk to watch. |

## Four checks before you trust any yield

1. **Payout ratio.** Dividends ÷ profits (or cash flow for REITs and pipelines). Under about 75% is comfortable. Over 100% means the company is borrowing or shrinking to pay you.
2. **Record.** How many years of payments without a cut? Decades of raises (Altria, Realty Income, Enterprise Products) are the strongest evidence a payout survives bad years.
3. **Why is the yield high?** If the stock is near its 52-week low, the yield rose because the price fell, and the market is betting on a cut. ORC and AGNC are both at their lows today.
4. **Total return, not yield.** A 24% payout on a stock that drops 40% leaves you down 16%. A 6% payout on a stock that holds its value leaves you up 6%.

## What $10,000 pays per year

| | |
|---|---|
| Verizon at 6.32% | **$632** |
| Enterprise Products at 6.06% | **$606** |
| Altria at 5.95% | **$595** |
| Realty Income at 5.87% | **$587** |
| AGNC at 16.6% | **$1,660** |
| Orchid Island at 24.1% | **$2,410** |

The red lines look better until the price moves: Orchid Island's shares have lost about $3,600 of every $10,000 over the past year, more than the dividend paid. Dividends from REITs, partnerships and option funds are also mostly taxed as ordinary income.

**BOTTOM LINE**

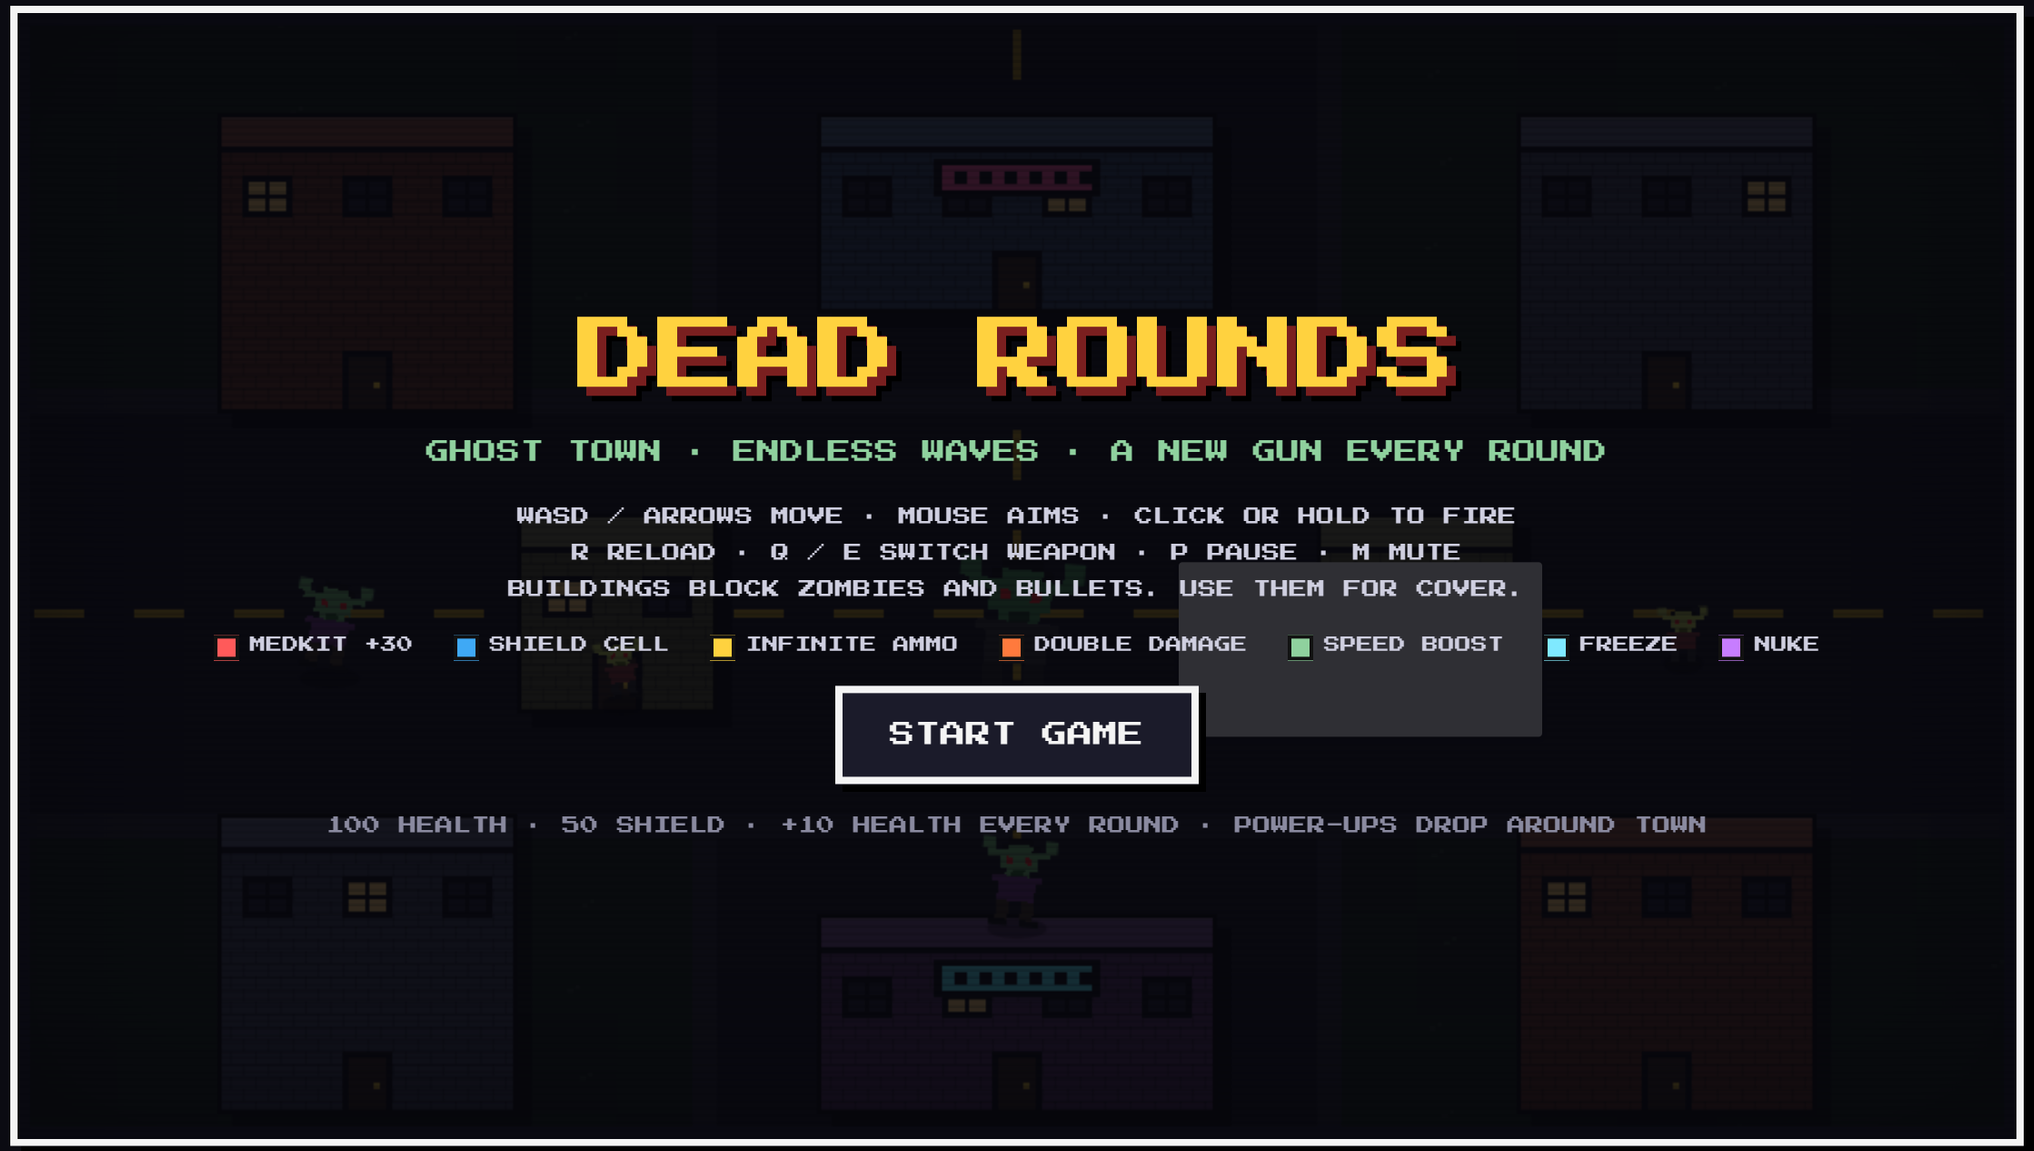

The single highest yield on the U.S. market today is an option-income fund paying about 35% on a share price that fell 80% in a year. The highest-yielding ordinary stocks are mortgage REITs at 13–24%, and every one of them is at or near a 52-week low. The highest yields backed by decades of uninterrupted, rising payments are about **6%**: **Verizon, Enterprise Products, Altria and Realty Income**. If "best" means the most income you are likely to receive, it is that group, not the top of the list.

Yields and prices from Yahoo Finance quote pages retrieved Oct 21, 2026 (ORC and EPD live this morning; MO and PFE at the Oct 20 close; O Oct 19; VZ and BTI Oct 16; EIX Sep 10; NLY Sep 4; MSTY Sep 9); MarketBeat dividend report dated Oct 20, 2026 for ARR, CRT and MST; Sure Dividend's high-dividend review (Oct 7, 2026) for payout coverage. Yields move every day with prices. This is general information, not a recommendation; talk to a licensed financial advisor before investing.
